EDUCATION

- University of North Carolina at Chapel Hill, USA *PhD in Computer Science, Aug 2023 - May 2028*
- Huazhong University of Science and Technology, China *Master in Biomedical Engineering, Sept 2019 - June 2022*
- Yunnan Normal University, China *Bachelor in Computer Science, Sept 2015 - June 2019*

RESEARCH INTEREST

Digital twins of the human body: generative models that build an individual, time-evolving representation of a person from routinely measured signals, and that can be run forward under altered conditions. I work on 4D generation of deforming anatomy conditioned on sparse physiological measurement, on keeping generated geometry valid by construction rather than by penalty, and on scaling these models to population-size cohorts.

RESEARCH EXPERIENCE

- University of North Carolina at Chapel Hill [🌐](#) *Research Assistant, Aug 2023 - Current*
 - **4D Motion Generation:** Built a mechanics foundation model that generates individualized 4D cardiac motion, a mesh deforming over the cardiac cycle, conditioned only on the surface ECG, so a dense moving geometry is recovered from a sparse boundary measurement [5].
 - **Conditional Generation of Anatomy at Population Scale:** Built a latent diffusion model that generates a person's multi-organ imaging phenotype from tokenized EHR event sequences on UK Biobank (~500K histories; 44.8K brain / 24.0K heart / 28.7K liver / 32.2K kidney imaged participants), evaluated on 1,000+ diseases, and supporting scenario generation by conditioning on an altered mediating state [3]. Co-authored an ICLR '25 Spotlight on conditional diffusion with ordinal regression for longitudinal progression generation [16].
 - **Geometry Valid by Construction:** Designed SPD-VQVAE, a vector-quantized autoencoder over a Cholesky factorization that keeps every generated connectivity matrix in the symmetric positive-definite cone with no projection or repair step, with a proof that it avoids $O(N^3)$ cost (Theorem 3.1) [3]; and studied neural dynamics on Riemannian manifolds with a scattering-transform mixer [20].
 - **Pretraining at Scale:** Pretrained the Large Connectome Model (1.2B) with a multitask objective, and BrainMoE, a Mixture-of-Experts with a cognition joint embedding for robustness across cohorts and acquisition pipelines [1][14][13].
- EGRA.ai [🌐](#) *Research Intern, May 2026 – Aug 2026*
 - **RL post-training:** Trained a reward model on physiological feedback signals to supplement human preference labels, and ran GRPO policy optimization against a programmatically verifiable composite reward.
- University of North Carolina at Chapel Hill *Predoctoral Fellow, Aug 2022 - Aug 2023*
 - **Teravoxel 3D at Cohort Scale:** Built 3D nucleus instance segmentation and the CellPheno phenotyping platform for whole-brain lightsheet volumes, applied across a 118-brain cohort [24][6].
- Huazhong University of Science and Technology *Graduate Researcher (MSc), Sept 2019 – June 2022*
 - **Gigapixel Throughput:** First-authored a cytology framework that processes a 4-gigapixel whole slide image in 55.9s [27], and a glandular-cell detector robust to out-of-distribution data [26]; contributed to a multi-center screening system in Nature Communications (3,545 slides, 5 hospitals, 5 scanner types) [29].

PROJECTS

- **CyberNeuro: On-Device Multi-Agent Assistant for Imaging and Biomarker Data** *Jan 2026 - May 2026*
Tools: [Ollama, MedGemma, gpt-oss, FastMCP, A2A, LangGraph, FastAPI, React] [🔗](#) [Demo](#)
 - **Led an 11-role agent system** (planner → critic → executor → researcher → reporter) over an MCP tool layer with reflection under a retry budget and state rollback; on an in-house 500-query benchmark it reaches 95.8% routing accuracy (100% precision, 88.7% recall) and 93.6% end-to-end success at 19.33s per query, with every inference running locally (MedGemma 4B, gpt-oss 20B).

SKILLS

- **Generative & 4D Modeling:** Conditional latent diffusion, 4D motion generation from sparse conditioning, manifold-constrained generation (SPD / Cholesky), Riemannian representations, graph transformers, Mixture-of-Experts, foundation-model pretraining (1.2B), RLHF & GRPO, LLM agents with MCP tool use
- **3D & Volumetric Data:** Teravoxel lightsheet microscopy, gigapixel whole slide images, multi-organ MRI, ECG, 3D instance segmentation, multi-site external validation across scanners and pipelines; BIDS, DICOM, NIfTI, local inference
- **Engineering:** Python, PyTorch, C++, TypeScript / React, FastAPI, Nextflow, Ollama, FastMCP, multi-GPU distributed training, HPC administration (10 nodes, 20 GPUs, 1.5PB)

HONORS & SERVICE

- **Honors:** Editor of Distinction Award 2025, Scientific Reports (editorial board); Graduate School Transportation Grant, UNC-Chapel Hill; Outstanding Graduate, Huazhong University of Science and Technology
- **Conference Reviewer:** NeurIPS, ICML, ICLR, AAAI, AISTATS, MICCAI
- **Journal Reviewer:** IEEE Transactions on Medical Imaging, NeuroImage, Pattern Recognition

TALKS

- 2025 Tissue Clearing & Imaging Conference, UNC-Chapel Hill  Speaker, Apr 2025
- **CellPheno:** A High-throughput Computational Platform of Cellular Phenotyping for Real-world Whole Brain Microscopy Images.
