EDUCATION

- University of North Carolina at Chapel Hill, USA *PhD in Computer Science, Aug 2023 - May 2028*
- Huazhong University of Science and Technology, China *Master in Biomedical Engineering, Sept 2019 - June 2022*
- Yunnan Normal University, China *Bachelor in Computer Science, Sept 2015 - June 2019*

RESEARCH INTEREST

Research scientist (intern) in generative models and post-training. I build conditional diffusion and VQ-VAE models over image, mesh, graph, and time-series data, pretrain a 1.2B multitask model and a Mixture-of-Experts encoder, and post-train language models with reward modeling and PPO.

RESEARCH EXPERIENCE

- University of North Carolina at Chapel Hill  *Research Assistant, Aug 2023 - Current*
 - **Conditional Generative Models for Digital Twins:** Generate 4D cardiac mesh sequences over the full cycle from the surface ECG [5]. Generate counterfactual disease trajectories with conditional latent diffusion over tokenized event sequences, factorized as $P(\text{Future}|\text{Biomarker}) \cdot P(\text{Biomarker}|\text{History})$ with imaging biomarkers as mediators, over ~500K subjects and 1,000+ diseases [3][16]. Design SPD-VQVAE, a VQ-VAE whose decoder emits a Cholesky factor so every generated covariance matrix is positive definite by theory.
 - **Foundation Model Pretraining:** 1.2B-parameter multitask pretraining [1] and a Mixture-of-Experts encoder that holds accuracy under site and scanner shift [14].
 - **Geometric Deep Learning:** Graph transformers over pathway structure rather than pairwise edges [18][4]; a Riemannian manifold mixer on the scattering transform [20].
 - **LLM Agents:** Built an 11-role agent graph over an MCP tool layer with A2A messaging on local weights, evaluated on a 500-query benchmark at 93.6% task success; and an agent pipeline for neuroimage processing and quality control [10].
- EGRA.ai  *Research Intern, May 2026 - Aug 2026*
 - **Generative EEG Twin:** Built a text-conditioned diffusion model that generates per-fixation EEG for a reader from frozen Qwen3-Embedding features and demographics, trained over 60 subjects and 416K fixations.
 - **Reward Modeling and RL Post-Training:** Fed generated EEG through a frozen encoder into Bradley-Terry reward models on four base LMs with LoRA, as input feature and as privileged supervision, across 174 5-fold CV cells; post-trained a Llama-3.2-1B policy with PPO against the learned reward, evaluated on held-out RewardBench v1/v2 and 3-seed win rate.
- University of North Carolina at Chapel Hill *Predoctoral Fellow, Aug 2022 - Aug 2023*
 - **3D Nuclei Instance Segmentation:** Built a 2D-to-3D algorithm for anisotropic whole-brain lightsheet volumes, segmenting in the isotropic X-Y plane and tracking instances through the Z stack, at over 90% precision and recall and 15 hr per brain, one third of CellPose v2, over 30 to 50 million nuclei; shipped as CellPheno over a 118-volume cohort [24][6][11].
- Huazhong University of Science and Technology *Graduate Researcher (MSc), Sept 2019 - June 2022*
 - **High-Throughput Gigapixel Inference:** Built YOLCO, cutting forward passes per slide by two orders of magnitude and a gigapixel slide from 22.5 minutes to 55.9s in the deployed C++ release, at 0.872 AUC over 2,019 slides from four scanners [27]; and a detector under distribution shift [26].
- Nanyang Technological University, Singapore *Research Intern, Jun 2021 - Sept 2021*
 - **Audio-Visual Emotion Recognition:** Built a spatial-temporal network, 2D-CNN plus TCN for video and parallel TCNs for audio, joined by leader-follower attentive fusion. A 300-frame window against 36 to 48 for prior work gave CCC 0.463 valence and 0.492 arousal on Aff-Wild2, against baseline 0.200 and 0.190 [28].
- Yunnan Normal University *Research Assistant, Sept 2016 - June 2019*
 - **Non-Rigid Registration:** Multi-temporal registration of UAV imagery [32]; non-rigid point set and image registration with finite mixture models under structure and curvature constraints [31][30].

SKILLS

- **Generative Models:** Conditional latent diffusion, VQ-VAE, digital twins, counterfactual sampling
- **RL Post-Training:** Bradley-Terry reward modeling, PPO with LoRA, RewardBench and best-of-N evaluation
- **LLM Agents & NLP:** Multi-agent orchestration, MCP tools, language modeling, Mixture-of-Experts pretraining
- **Computer Vision:** 3D instance segmentation, object detection, non-rigid registration, 4D mesh generation
- **Engineering & Data:** Python, PyTorch, C++, distributed training, HPC admin (20 GPUs), Google Cloud Platform

HONORS & SERVICE

- **Honors:** Editor of Distinction Award 2025, Scientific Reports (editorial board); Graduate School Transportation Grant, UNC-Chapel Hill; Outstanding Graduate, Huazhong University of Science and Technology
- **Conference Reviewer:** NeurIPS, ICML, ICLR, AAAI, AISTATS, MICCAI
- **Journal Reviewer:** IEEE Transactions on Medical Imaging, NeuroImage, Pattern Recognition

TALKS

- 2025 Tissue Clearing & Imaging Conference, UNC-Chapel Hill  Speaker, Apr 2025
- **CellPheno:** A High-throughput Computational Platform of Cellular Phenotyping for Real-world Whole Brain Microscopy Images.
